2024-4-22

Django Rest Framework Meta

Achievements

The 2022 icpc Al-baath and hama unvi

The 2023 icpc Al-baath and hama unvi

store_api

This site provides API for a store for sale, as it includes creating a user, modifying it, obtaining a token, creating products, modifying them, and displaying them with a filter and paginator, creating requests, modifying them, and deleting them.

Library-management

This site is for managing a library for selling and renting books, where you can add, edit, and delete books, display available, sold, and rented books, and display profits from rented and sold books.

words-english

The site helps to memorize English vocabulary, where the word is entered with its translation into Arabic, and the site asks random questions from the words that the user has memorized, shows options, and keeps the words that the user answered incorrectly, and shows them in a sidebar.

tic-tac-toe

This site is for the XO game and allows the user to create accounts and log in, where each user can create a private room and give the room name to his friend, and his friend searches for the room and enters it, and when the number of people in the room reaches 2, no additional person is allowed to enter,

and the movements are transferred between players in real time with the presence of a paginator to display the rooms.

manage-room

This site allows you to create accounts and log in. It manages rooms, where each room has tasks that can be added or its status modified without updating the page. Each room has a real-time conversation.
